Art Unit: 2655

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claims 1-4 and 7 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification as originally filed does not disclose the use of a switching element that is controlled based on either the distance of a positional relationship between the track and the collecting point on the photo detection. Such limitation is cited in the abstract and the summary. However, none of the cited embodiments or the figures cited shows such limitation.

Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The limitation "the step of switching" lacks proper antecedent basis.

In order to overcome the above 112 first paragraph rejection. Applicant's argument must identify the figure and/or the pages within the specification such support could be found.

Claims 5 and 6 are allowed.
